Sampling at Skinner Landfill and Industrial Excess Landfill

Steve Ostromka, Chief
Technical Support Unit

Chuck Fly, Chief
Contract Project Management Section

This is the written confirmation of our discussion of April 22, 1986 regarding proposed sampling activities at Skinner Landfill and Industrial Excess Landfill.

After discussions between the Quality Assurance Office (QAO) and Emergency & Remedial Response Branch staff, we have decided to conduct limited sampling at both of these sites without having an approved Quality Assurance Project Plan (QAPP).

At the Skinner Landfill we need collected 27 soil samples and analyzed through the Contract Laboratory Program (CLP) using Routine Analytical Service (RAS). The QAPP for this site has been reviewed by the QAO with written comments received by E&RR expressing concerns only about proposed Special Analytical Services (SAS) activities.

At the Industrial Excess Landfill we need collected 7 soil and leachate samples and analysed through the RAS procedure. The QAPP for this site has been reviewed by the QAO with written comments received by E&RR expressing concern about groundwater and residential well sample analysis.

We have decided to have the samples collected and analyzed by procedures that have not been questioned by the QAO. Please arrange space for these samples with the Sample Management Office. The OEM contractors who will collect these samples will contact Dennis Wesolowski about scheduling these samples.
